

TEJIRI MAYONE

Senior Full-Stack Engineer (Angular & Laravel)

EMEA (UTC+1) · Remote | terrymayone@gmail.com | tejirimayone.com.ng | github.com/terrymight

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 5+ years architecting high-scale, predictable web applications. Expert in secure Laravel backends and scalable Angular frontends using TypeScript and NgRx, with a track record of measurable delivery: 30% fewer bug regressions from disciplined state management, 30% faster document processing, and 35% faster release cycles through automated CI/CD. Experienced owning systems end-to-end — architecture, API security, deployment, and team mentorship.

CORE TECHNICAL SKILLS

Frontend: Angular, TypeScript, NgRx, RxJS, PrimeNG, Responsive UI, Accessibility (A11y), Core Web Vitals

Backend: Laravel (PHP), REST APIs, RBAC, Passport, Sanctum, JWT, OAuth2, OTP / Identity Verification Flows

Databases: PostgreSQL, MySQL, MongoDB

DevOps & Cloud: Docker, CI/CD (Jenkins), Infrastructure as Code, AWS (EC2, S3)

Testing & Tools: Cypress, Jasmine, Karma, Git, System Architecture, Performance Optimization

PROFESSIONAL EXPERIENCE

Senior Frontend Developer | Kuantarium Technology Limited *May 2025 – Present*

- Directs the architecture and delivery of scalable Angular applications across internal and client-facing platforms.
- Architected Angular/NgRx frontend for 3 client-facing platforms; established component and state management patterns that reduced bug regression by 30% across sprints.
- Sole frontend developer on Visitavia, a live B2B visitor and employee management platform covering onboarding, check-in, and visitor-invitation flows.
- Implemented new authentication and led UI/UX enhancements for macathie.com using modern Angular standards.
- Maintains test-gated CI/CD pipelines using Docker and Jenkins for zero-friction deployments; mentors junior engineers on clean code standards.

Full-Stack Developer | Courtland Health Care Services *Nov 2023 – Oct 2025*

- Designed a Laravel-Angular applicant tracking system serving 100+ monthly users.
- Reduced document processing time by 30% by implementing optimized workflows with DomPDF and FPDI.
- Automated CI/CD pipelines on AWS (EC2/S3), cutting release time by 35% while maintaining zero downtime.

Full-Stack Developer | Dipbits Technology Ltd *Apr 2021 – Oct 2025*

- Developed modular Angular SPAs, improving user satisfaction by 20% through custom theming and UI enhancements.
- Reduced API latency by 25% by developing reusable Angular services for streamlined data flow.
- Led backend development using Laravel and MySQL for scalable REST APIs.

KEY PROJECTS

Visitavia — B2B Visitor & Employee Management Platform *2025 – Present*

- Sole frontend engineer (Angular); role held under active client NDA, described here at a general level.
- Delivered employee management, check-in, and visitor-invitation workflows, including document upload and passport-verification flows integrated against REST identity/document APIs.

KodaOTP (IVerify) — OTP / Identity Verification Platform *2025*

- Built both the Angular frontend and Laravel backend independently as sole engineer — architecture, API design, and delivery end-to-end.

Live at kodaotp.com

Secure RBAC API (Laravel)

- Built a custom Role-Based Access Control system from scratch using Laravel Passport, middleware, and Docker.

Angular E-Commerce

- Developed a modern commerce frontend focused on modular architecture, maintainable state flow, and production-ready TypeScript.

EDUCATION & INFRASTRUCTURE

B.Sc. Computer Science — National Open University of Nigeria (2019 – 2023)

Remote-ready: dedicated home office with 24/7 power backup and high-speed fiber internet
